Law (ASCOLA Competition Law Series):

In recent years, an impressive proliferation of competition laws has been seen around the world. While this development may lead to greater diversity of approaches, economic arguments may promote convergence. The contributions to this book look at a number of most topical issues by asking whether the competition world is turning more towards convergence or diversity. These issues include, among others, the changing role of economics in times of economic crises and political change, the introduction of criminal sanctions, resale-price maintenance, unilateral conduct and the application of competition law to intellectual property and state-owned enterprises. *More Common Ground for International Competition Law* will appeal to academics, PhD students, and postgraduate students law and economics, members of competition agencies, legal practice and international business.
