Carol Chomsky, Christina Kunz : Sale of Goods: Reading and Applying the Code (American Casebook Series)
before purchasing it in order to gage whether or not it would be worth my time, and all praised Sale of Goods: Reading and Applying the Code (American Casebook Series):

0 of 0 people found the following review helpful. Disappointed- Book has too much Writing from Previous UserBy Delacy ThomasThis book has alot of assignments and the person before me wrote the answers to the assignments in the book. Most of the writing is in ink. I am very disappointed because I thought that the rental books would have minimal writing from previous users.0 of 0 people found the following review helpful. very scary book at firstBy

aydog909interesting book, you really have to pay attention to the professor for the answers like an examples an explanation style casebook for sales,

This new book offers a fresh approach to teaching the law of sales of goods. Through precisely crafted problems, the book guides students through their own close textual analysis of Article 2 of the Uniform Commercial Code and then invites them to test their understanding by applying the Code to complex fact situations. Readers learn how the Code works by actively parsing the language themselves and exploring the interpretational difficulties presented, rather than relying more passively on cases or explanatory text, which are included here only when necessary to furnish rules or interpretations not derivable by readers' own close reading and analysis. With a primary focus on Article 2, the book also incorporates relevant material from Articles 1 and 7, and from related statutes such as the Magnuson-Moss Warranty Act, Uniform Electronic Transactions Act (UETA), and the federal Electronic Signatures in Global and National Commerce Act (E-Sign). It concludes with ! an assignment on the economic loss doctrine and the relationship between Article 2 claims and tort liability. The text teaches the doctrinal content of the law of sales of goods, while concurrently building students' skills in reading statutes critically and constructing legal solutions to complex problems. Readers will emerge from the process with a deep understanding of the Code, and with the skill to read any statute---including any amendments to Article 2---more effectively.
